

# CLIMATE JUSTICE & OHS!

## We are Developing A Training Pack for Trade Unions

Do you want to take action on the frontline of climate change: health and safety?

Extreme climate events are creating more risks for workers, including those from:

- Extreme weather conditions like heat, storms, floods
- Rising air pollution
- Increased wild fires
- Impacts on buildings and infrastructure
- Consequences of building on contaminated land
- Biological hazards

Trade union safety and workplace reps need solutions that they can negotiate in their workplace. These training materials, will be full of practical activities for reps and workers to do now, to reduce the risk of working in extreme climate events.

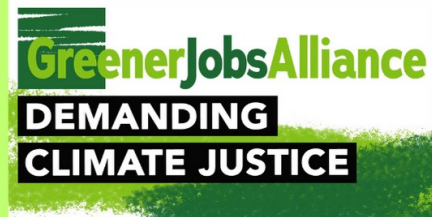

These materials will be ready for pilot testing in **January 2026**.  
Perfect for the *TUC year of trade union climate action 2025-2026*.

**We are looking for groups of trade unionists to pilot the training materials.**

Please get in touch if you have suggestions about what we should include or if you would like to get involved with the development of the training materials. We are especially keen to hear from young trade unionists.

Get in touch if you know of a group i.e. a youth committee or health and safety committee, who would like to pilot the materials.

*Turn over for more information*

Greater Manchester Hazards Centre, along with Greener Jobs Alliance and TUCAN are developing the pack of education materials aimed at Safety Reps and other Workplace Representatives.
